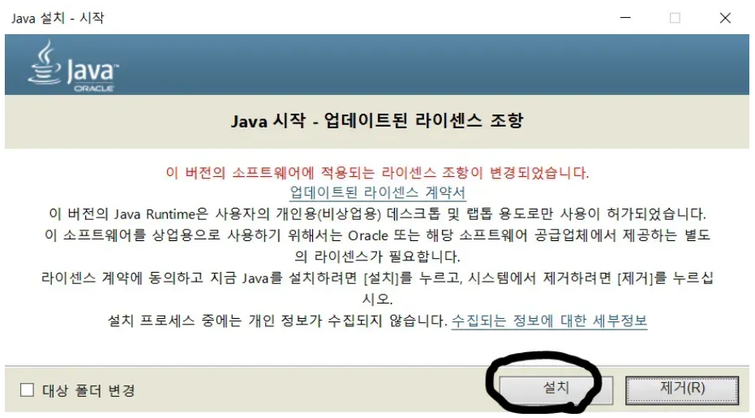
아래의 Frost-Next는 Naejadu 패치를 적용한 최신 버전입니다.

Frost-Next 할 때도 FMS할 때와 마찬가지로 컴퓨터 절전 안되게 설정한다.

참고로 AppData는 파일 탐색기의 '폴더 및 검색 옵션'에서 '숨김 파일, 폴더 및 드라이브 표시'를 체크해야 보인다.

1. Java 설치.



Java 설치 - 시작
Java 시작 - 업데이트된 라이센스 조항
이 버전의 소프트웨어에 적용되는 라이센스 조항이 변경되었습니다.
업데이트된 라이센스 계약서
이 버전의 Java Runtime은 사용자의 개인용(비상업용) 데스크톱 및 랩톱 용도로만 사용이 허가되었습니다.
이 소프트웨어를 상업용으로 사용하기 위해서는 Oracle 또는 해당 소프트웨어 공급업체에서 제공하는 별도의 라이센스가 필요합니다.
라이센스 계약에 동의하고 지금 Java를 설치하려면 [설치]를 누르고, 시스템에서 제거하려면 [제거]를 누르십시오.
설치 프로세스 중에는 개인 정보가 수집되지 않습니다. 수집되는 정보에 대한 세부정보
대상 폴더 변경

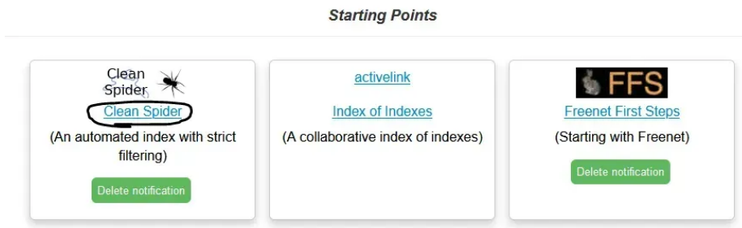
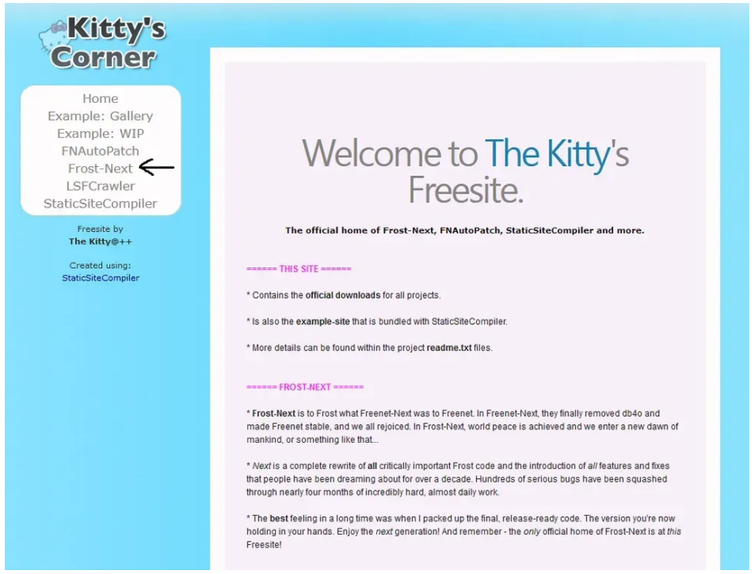
이 채널의 개념글

2. Freenet 메인 페이지에서 Clean Spider 클릭.

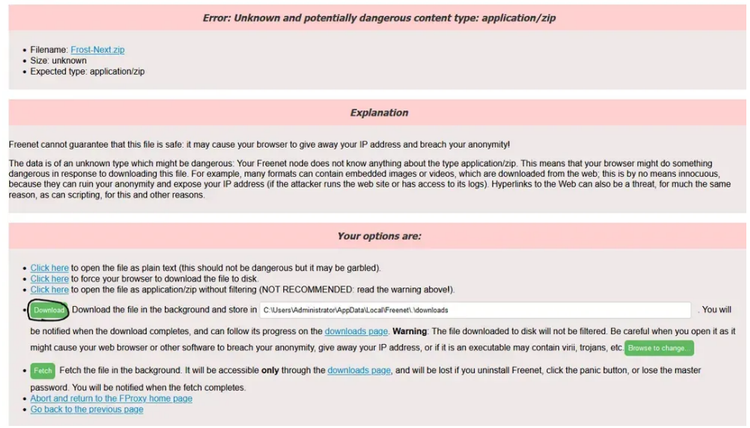


3. The Kitty's Corner 클릭.

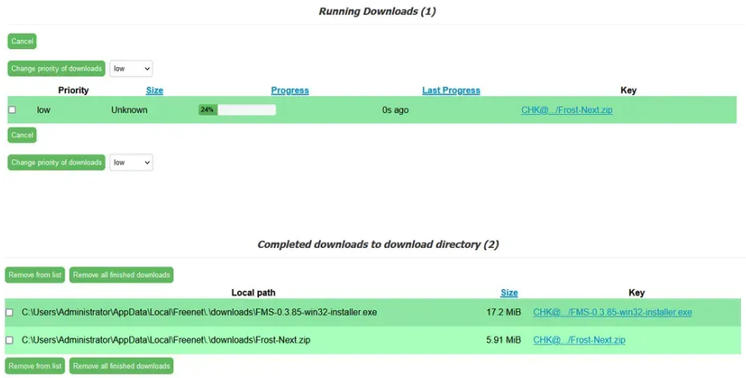
4. Frost-Next 클릭.



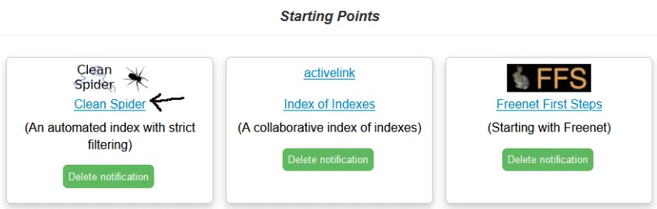
5. Frost-Next.zip 클릭하고 다운로드.



Error: Unknown and potentially dangerous content type: application/zip
Filename: Frost-Next.zip
Size: unknown
Expected type: application/zip
Explanation
Freenet cannot guarantee that this file is safe: it may cause your browser to give away your IP address and breach your anonymity!
The data is of an unknown type which might be dangerous: Your Freenet node does not know anything about the type application/zip. This means that your browser might do something dangerous in response to downloading this file. For example, many formats can contain embedded images or videos, which are downloaded from the web; this is by no means innocuous, because they can ruin your anonymity and expose your IP address (if the attacker runs the web site or has access to its logs). Hyperlinks to the Web can also be a threat, for much the same reason, as can scripting, for this and other reasons.
Your options are:
Click here to open the file as plain text (this should not be dangerous but it may be garbled).
Click here to force your browser to download the file to disk.
Click here to open the file as application/zip without filtering (NOT RECOMMENDED: read the warning above!).
Download
Download the file in the background and store in
C:\Users\Administrator\AppData\Local\Freenet\.\downloads
. You will be notified when the download completes, and can follow its progress on the downloads page. Warning: The file downloaded to disk will not be filtered. Be careful when you open it as it might cause your web browser or other software to breach your anonymity, give away your IP address, or if it is an executable may contain virii, trojans, etc.
Browse to change...
Fetch
Fetch the file in the background. It will be accessible only through the downloads page, and will be lost if you uninstall Freenet, click the panic button, or lose the master password. You will be notified when the fetch completes.
Abort and return to the FProxy home page
Go back to the previous page



6. Freenet 메인 페이지에서 Clean Spider 클릭.

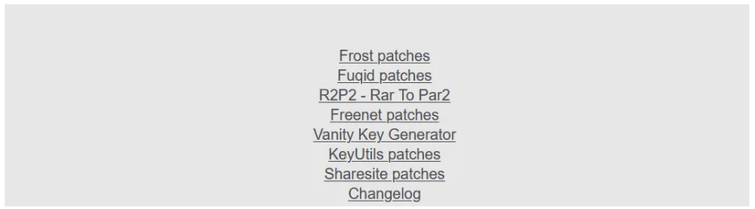


7. Naejadu Patches 클릭.

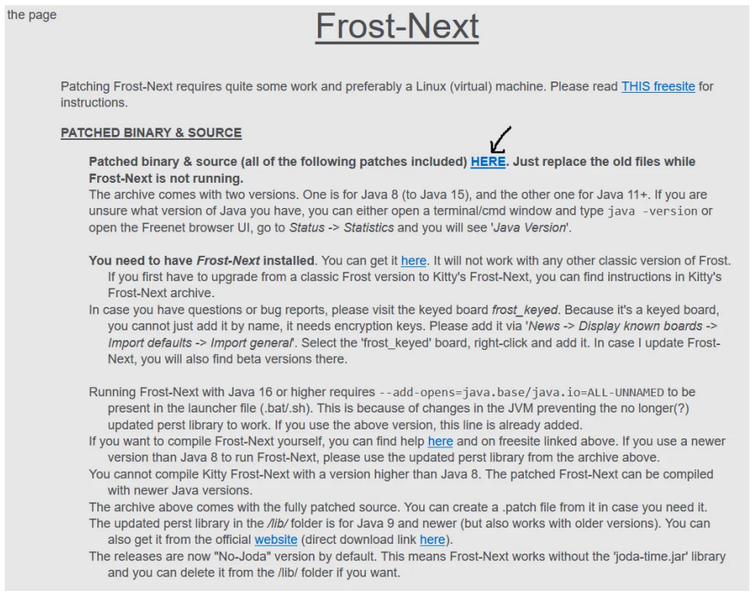
Naejadu Patches (en)
Naejadu Patches for Freenet, Frost-Next, Fuqid, Sharesite, KeyUtils, Vanity Keys, ...
Keywords: Patches, Fuqid, Frost, Frost-Next, Patch, Sharesite, Freenet, KeyUtils, R2P2, Vanity

8. Frost patches 클릭.

N-Patches
This is a collection of patches I wrote for various Freenet-related software.
You can either choose to compile the patches yourself, or to use the already compiled binaries if you trust me for whatever reason.

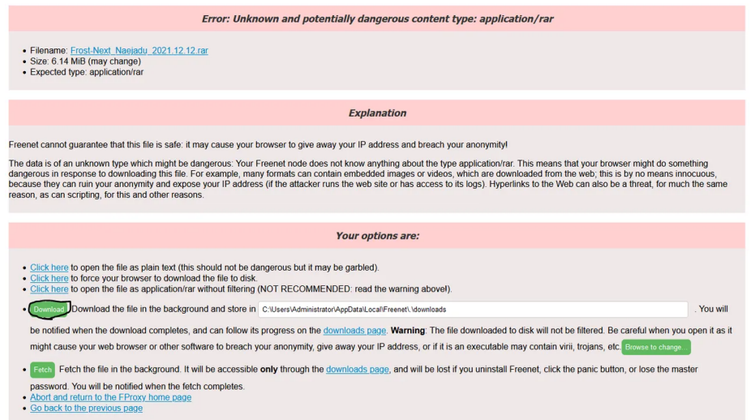


9. 파란색 HERE 링크 클릭.



the page
Frost-Next
Patching Frost-Next requires quite some work and preferably a Linux (virtual) machine. Please read THIS freesite for instructions.
PATCHED BINARY & SOURCE
Patched binary & source (all of the following patches included) HERE. Just replace the old files while Frost-Next is not running.
The archive comes with two versions. One is for Java 8 (to Java 15), and the other one for Java 11+. If you are unsure what version of Java you have, you can either open a terminal/cmd window and type java -version or open the Freenet browser UI, go to Status -> Statistics and you will see 'Java Version'.
You need to have Frost-Next installed. You can get it here. It will not work with any other classic version of Frost. If you first have to upgrade from a classic Frost version to Kitty's Frost-Next, you can find instructions in Kitty's Frost-Next archive.
In case you have questions or bug reports, please visit the keyed board frost_keyed. Because it's a keyed board, you cannot just add it by name, it needs encryption keys. Please add it via 'News -> Display known boards -> Import defaults -> Import general'. Select the 'frost_keyed' board, right-click and add it. In case I update Frost-Next, you will also find beta versions there.
Running Frost-Next with Java 16 or higher requires --add-opens=java.base/java.io=ALL-UNNAMED to be present in the launcher file (.bat/.sh). This is because of changes in the JVM preventing the no longer(?) updated perst library to work. If you use the above version, this line is already added.
If you want to compile Frost-Next yourself, you can find help here and on freesite linked above. If you use a newer version than Java 8 to run Frost-Next, please use the updated perst library from the archive above.
You cannot compile Kitty Frost-Next with a version higher than Java 8. The patched Frost-Next can be compiled with newer Java versions.
The archive above comes with the fully patched source. You can create a .patch file from it in case you need it.
The updated perst library in the /lib/ folder is for Java 9 and newer (but also works with older versions). You can also get it from the official website (direct download link here).
The releases are now "No-Joda" version by default. This means Frost-Next works without the 'joda-time.jar' library and you can delete it from the /lib/ folder if you want.

10. 파일을 다운로드 받는다.



Error: Unknown and potentially dangerous content type: application/rar
Filename: Frost-Next_Naejadu_2021.12.12.rar
Size: 6.14 MiB (may change)
Expected type: application/rar
Explanation
Freenet cannot guarantee that this file is safe: it may cause your browser to give away your IP address and breach your anonymity!
The data is of an unknown type which might be dangerous: Your Freenet node does not know anything about the type application/rar. This means that your browser might do something dangerous in response to downloading this file. For example, many formats can contain embedded images or videos, which are downloaded from the web; this is by no means innocuous, because they can ruin your anonymity and expose your IP address (if the attacker runs the web site or has access to its logs). Hyperlinks to the Web can also be a threat, for much the same reason, as can scripting, for this and other reasons.
Your options are:
Click here to open the file as plain text (this should not be dangerous but it may be garbled).
Click here to force your browser to download the file to disk.
Click here to open the file as application/rar without filtering (NOT RECOMMENDED: read the warning above!).

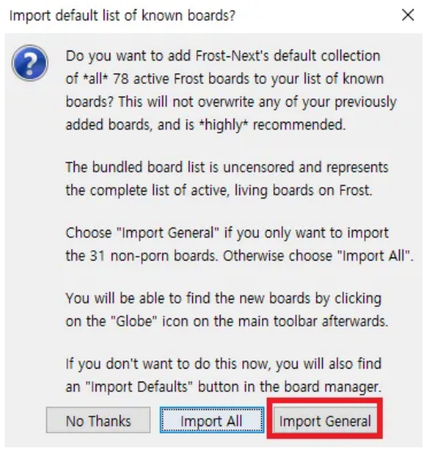
23. OK 클릭

This is where it all begins...
Welcome to Frost-Next!
Frost will now connect to a Freenet 0.7 node.
By default Frost connects to a node on localhost
using the standard FCP2 darknet port: 127.0.0.1:9481
Override Freenet FCP host:port

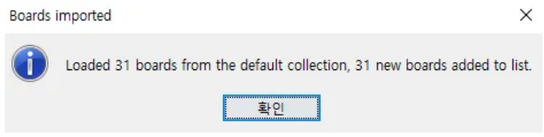
24. 닉네임 만들기.

25. Import General 클릭.

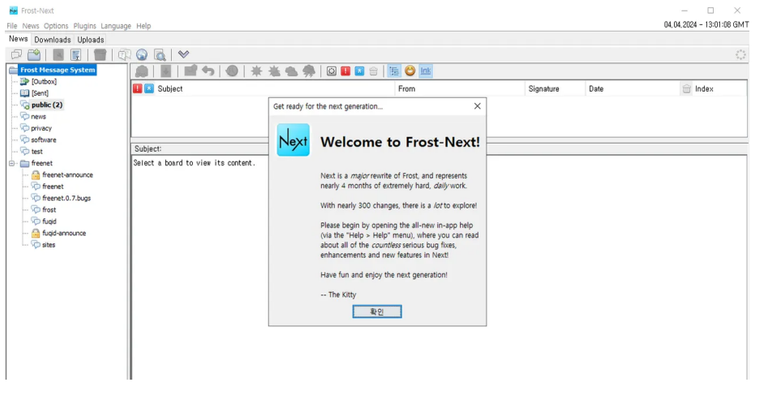


Import default list of known boards?
Do you want to add Frost-Next's default collection of *all* 78 active Frost boards to your list of known boards? This will not overwrite any of your previously added boards, and is *highly* recommended.
The bundled board list is uncensored and represents the complete list of active, living boards on Frost.
Choose "Import General" if you only want to import the 31 non-porn boards. Otherwise choose "Import All".
You will be able to find the new boards by clicking on the "Globe" icon on the main toolbar afterwards.
If you don't want to do this now, you will also find an "Import Defaults" button in the board manager.
No Thanks
Import All
Import General

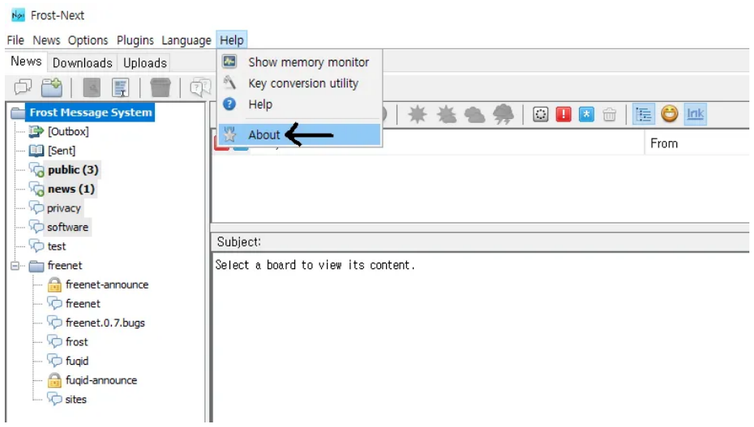
26. 확인 클릭.



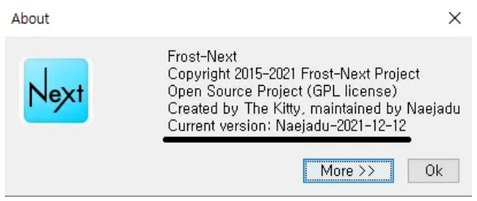
27. 확인 클릭.



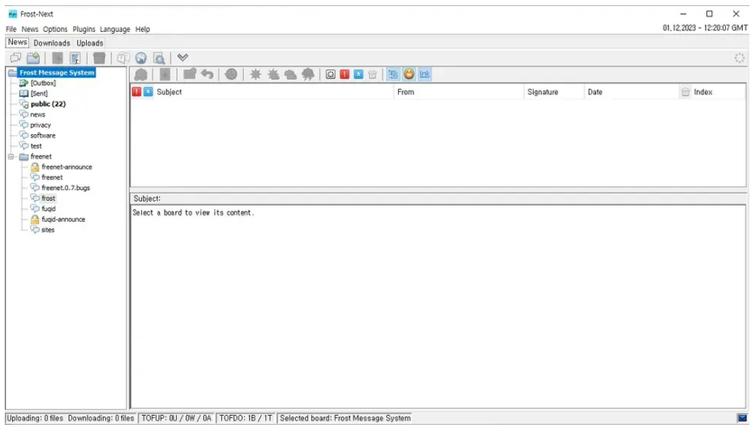
28. Help -> About 클릭.



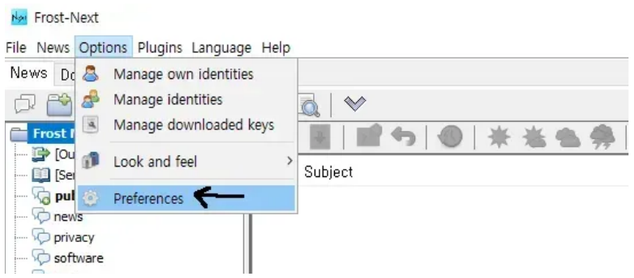
29. 현재 버전 확인.

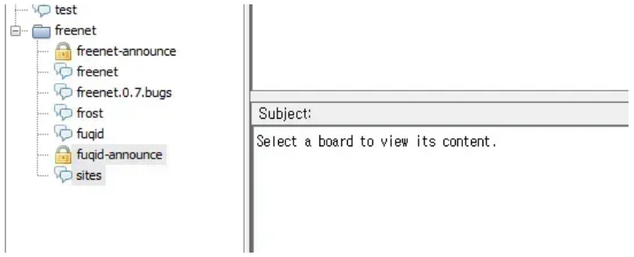


30. Frost-Next의 메인 화면 모습.

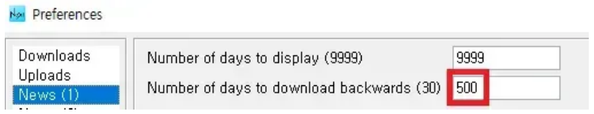


31. Options에서 Preferences 클릭.

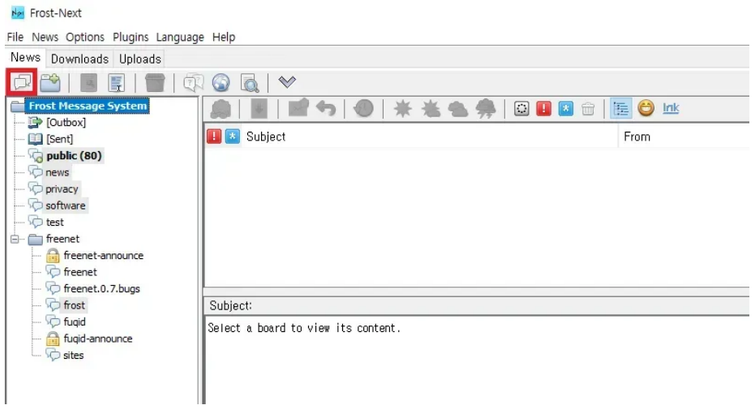




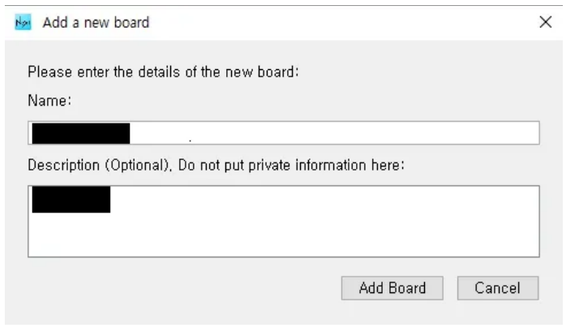
32. Number of days to download backwards 값을 500으로 변경한다.



33. New board 클릭.

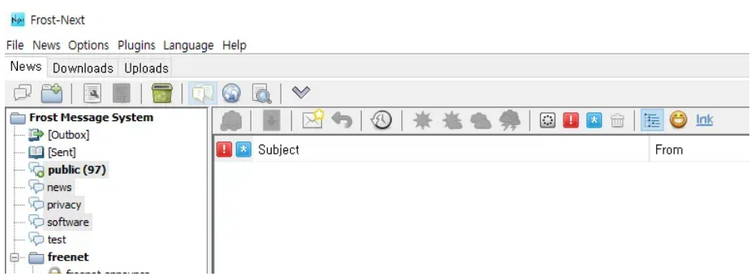


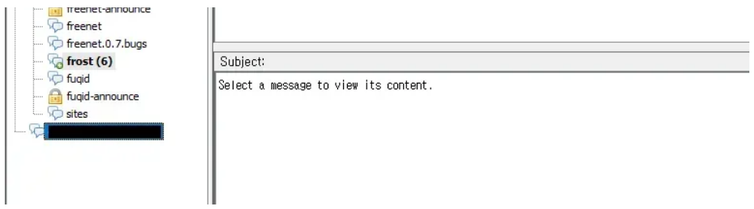
34. 보드를 추가할 수 있다.



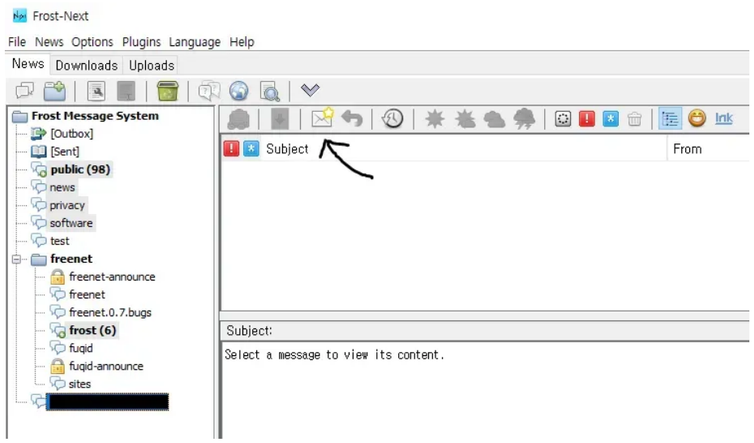
Add a new board
Please enter the details of the new board:
Name:
Description (Optional), Do not put private information here:
Add Board
Cancel

35. 아직 아무 글도 작성하지 않아 빈 모습이다.

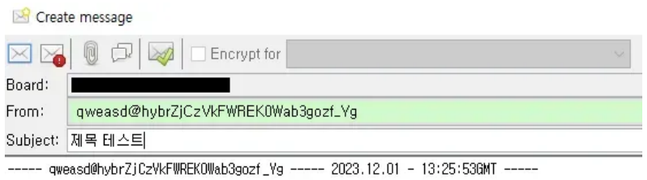




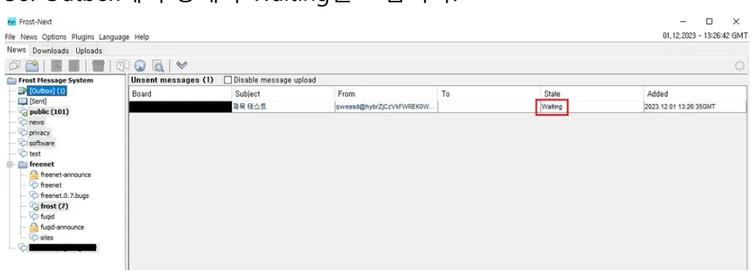
36. New message 클릭.



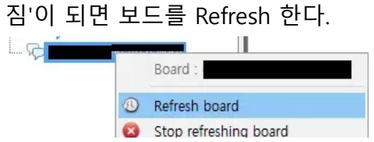
37. 글을 작성한다.

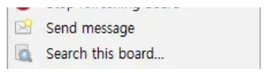


38. Outbox에서 상태가 Waiting인 모습이다.

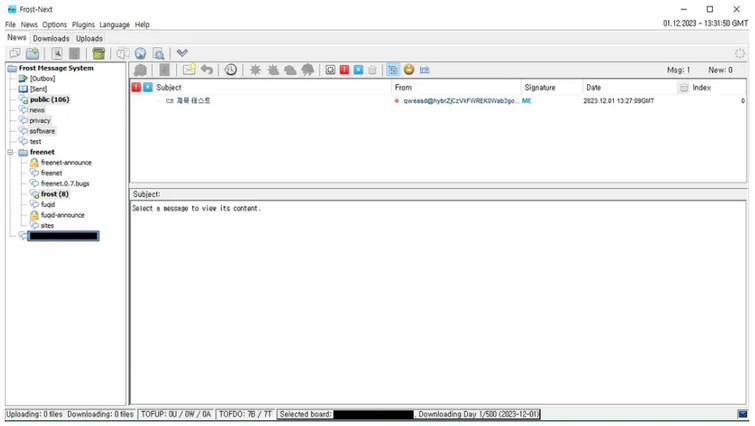


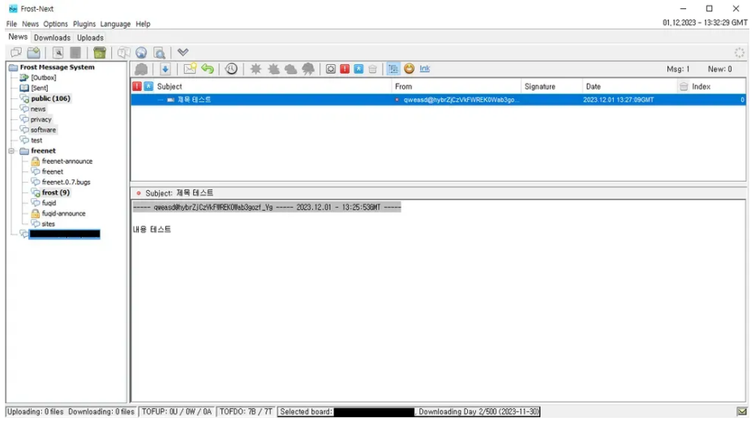
39. Outbox에서 상태가 'Waiting -> Uploading -> 업로드 완료되서 사라짐'이 되면 보드를 Refresh 한다.



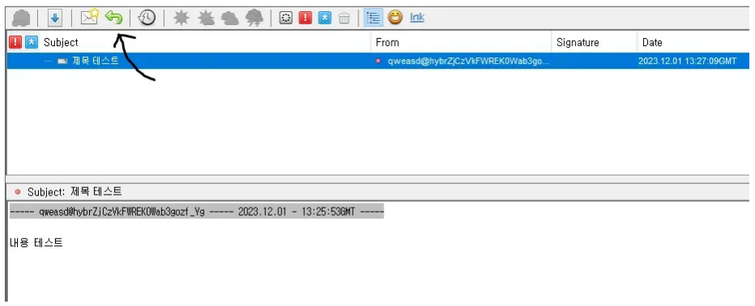


40. 글이 작성된 모습이다.





41. Reply 클릭.



42. 댓글이나 대댓글을 작성할 수 있다.

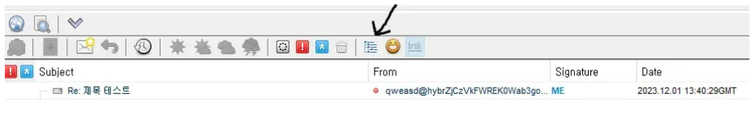
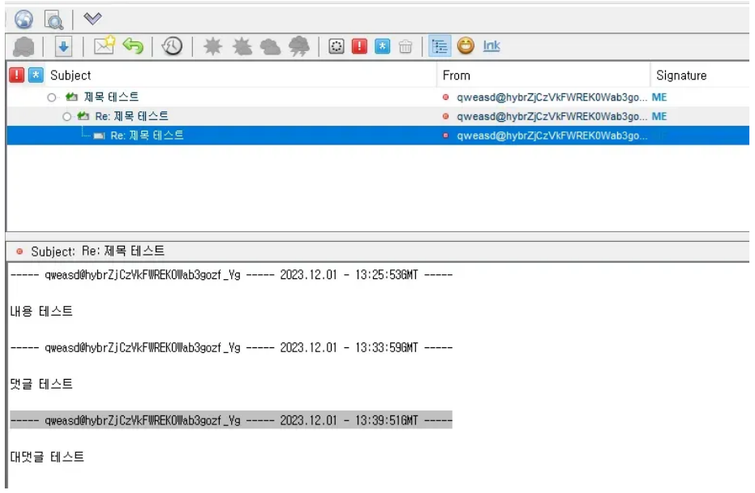
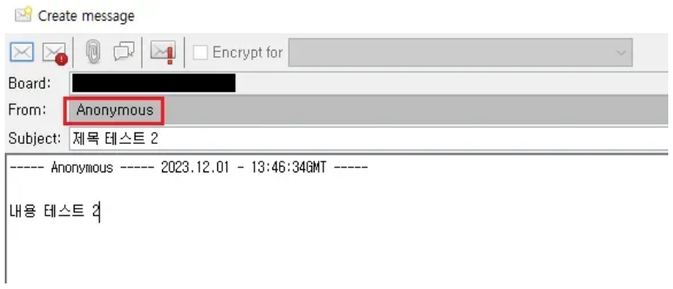
43. Display conversations as threads 클릭.

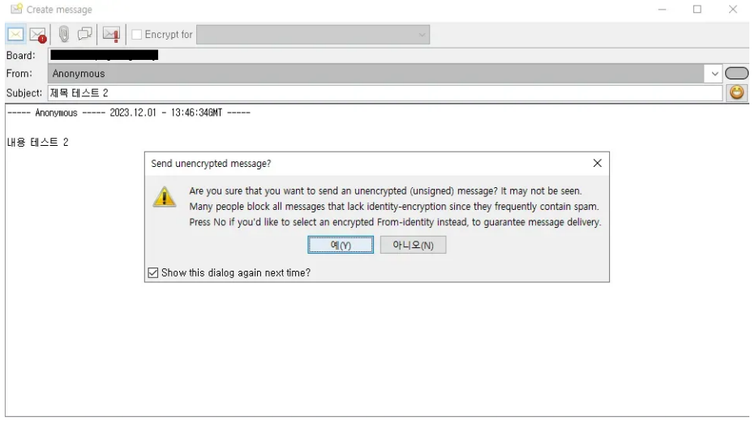


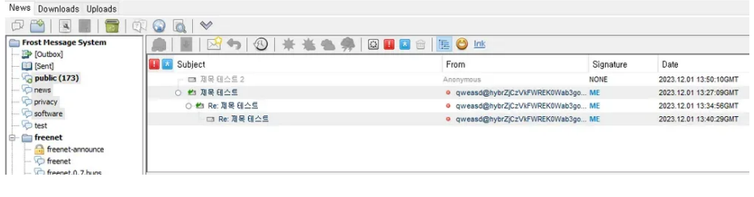
44. 스레드처럼 보여진다.

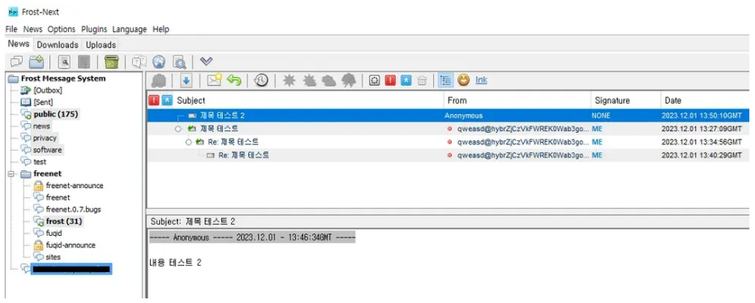


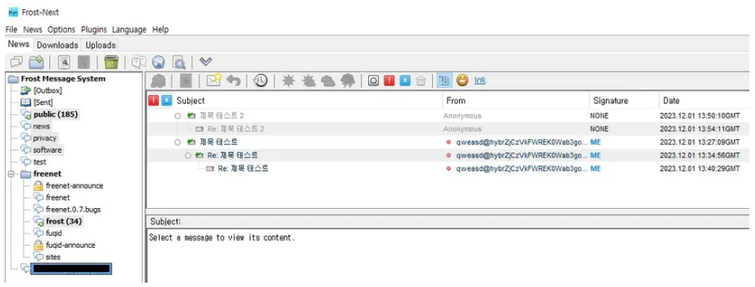
45. 닉네임을 밝히지 않고 글과 댓글을 작성할 수도 있다.

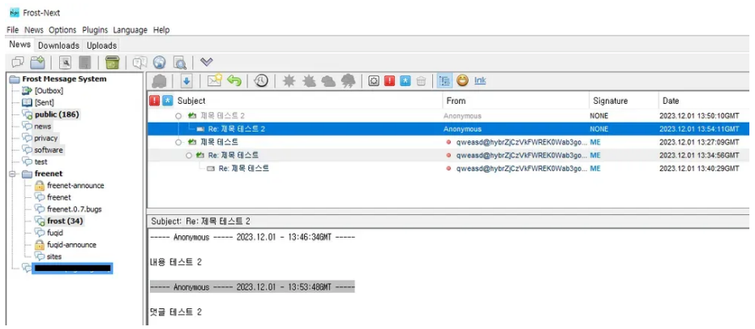












Frost-Next를 즐긴다. 포럼에 참여하려면 보드 추가한 뒤 Forst-Next 켜놓은채 몇시간 방치해두면 알아서 동기화된다.
